

## Java Web Mid-Term Exam Part 2

Total Marks: 20

**Background Information: Payroll Calculator**

Use the MVC pattern to provide a gross pay calculation for employees. To calculate the gross pay, the hourly rate is \$10.0 for the first 40 hours and \$15 for additional hours over 40 hours. For example, if hours worked is 50, the gross pay is \$550.

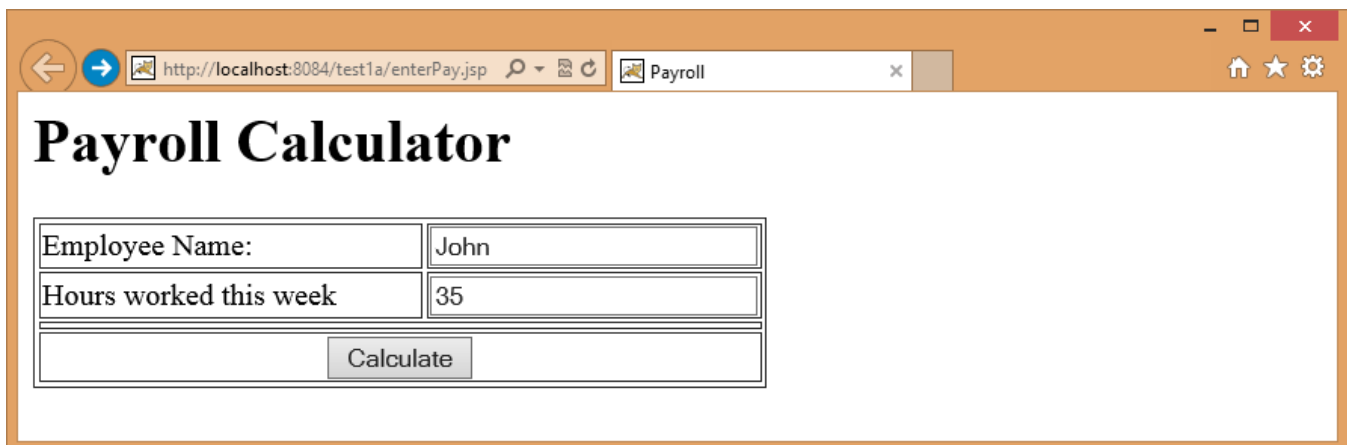

Study all the background information and all the partial code provided below. Then, complete the **CalculatePayServlet.java**, **enterPay.jsp**, **regular.jsp** and **overtime.jsp** starting in Page 6.

**IMPORTANT:** You are not allowed to create additional servlet or JSP other than the ones provided. Use EL within your JSP, as needed.

**web.xml:**

```
<?xml version="1.0" encoding="UTF-8"?>
<web-app version="2.5" ...>
  <servlet>
    <servlet-name>CalculatePayServlet</servlet-name>
    <servlet-class>controller.CalculatePayServlet</servlet-class>
  </servlet>
  <servlet-mapping>
    <servlet-name>CalculatePayServlet</servlet-name>
    <url-pattern>/Calculate</url-pattern>
  </servlet-mapping>
</web-app>
```

The **enterPay.jsp** page contains an HTML form with employee name and hours worked as input fields as shown below.

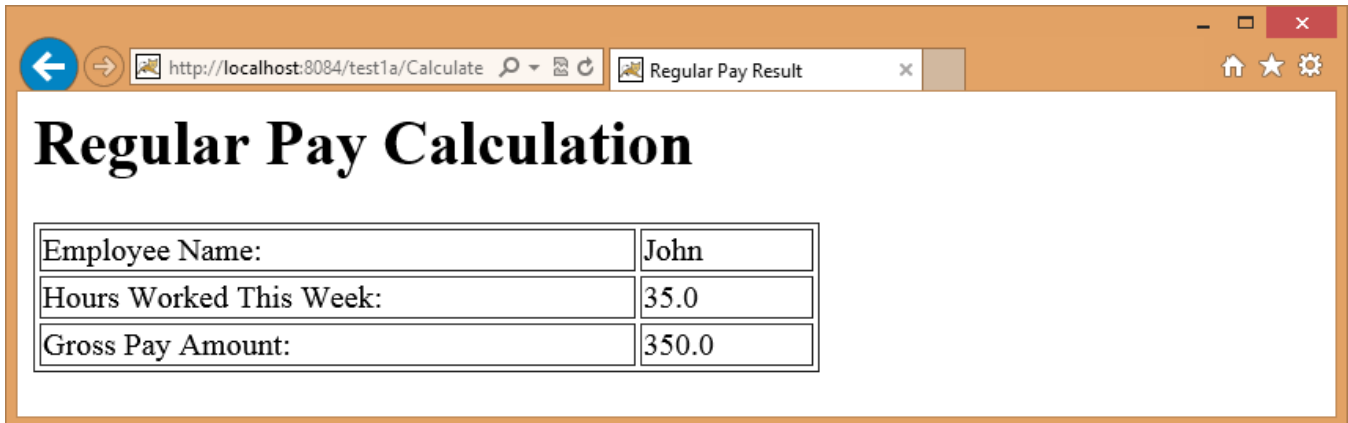

The screenshot shows a web browser window with the address bar displaying `http://localhost:8084/test1a/enterPay.jsp`. The page title is "Payroll". The main content area has a heading "Payroll Calculator" and a form with the following fields:

Employee Name:	John
Hours worked this week	35
<input type="button" value="Calculate"/>	

When the **Calculate** button is clicked, the data entered by the user will be sent to the **CalculatePayServlet**.

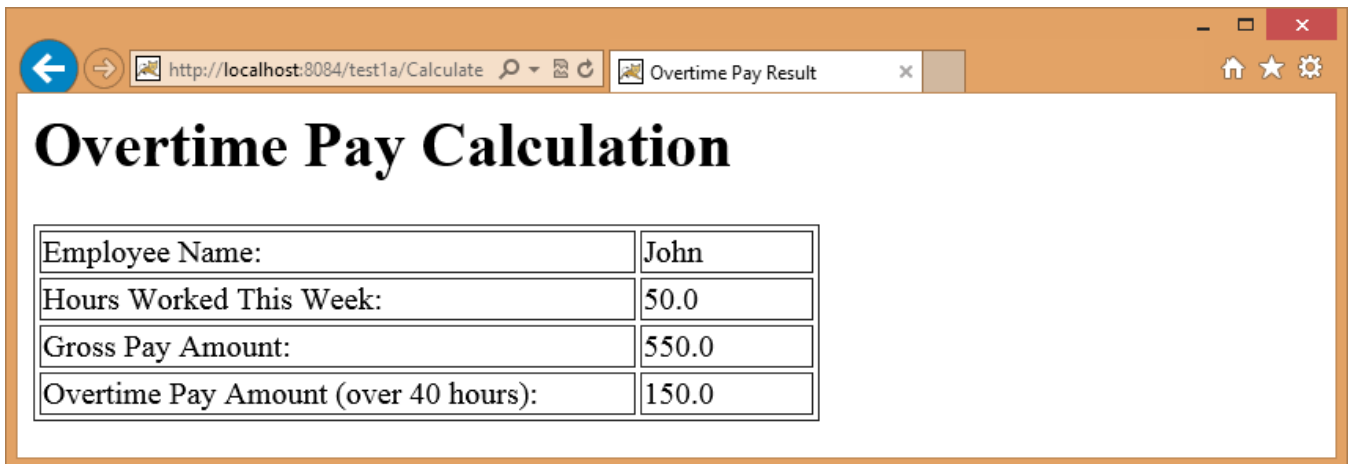

*Important:* If the **CalculatePayServlet** is called directly without any input parameters, it forwards control to the **enterPay.jsp**.

If hours worked is less than or equal to 40 hours, calculate the Gross Pay and forward to **regular.jsp** as shown below.

Employee Name:	John
Hours Worked This Week:	35.0
Gross Pay Amount:	350.0

If hours worked is more than 40 hours, calculate the Gross Pay and Overtime Pay, and forward to **overtime.jsp** as shown below.

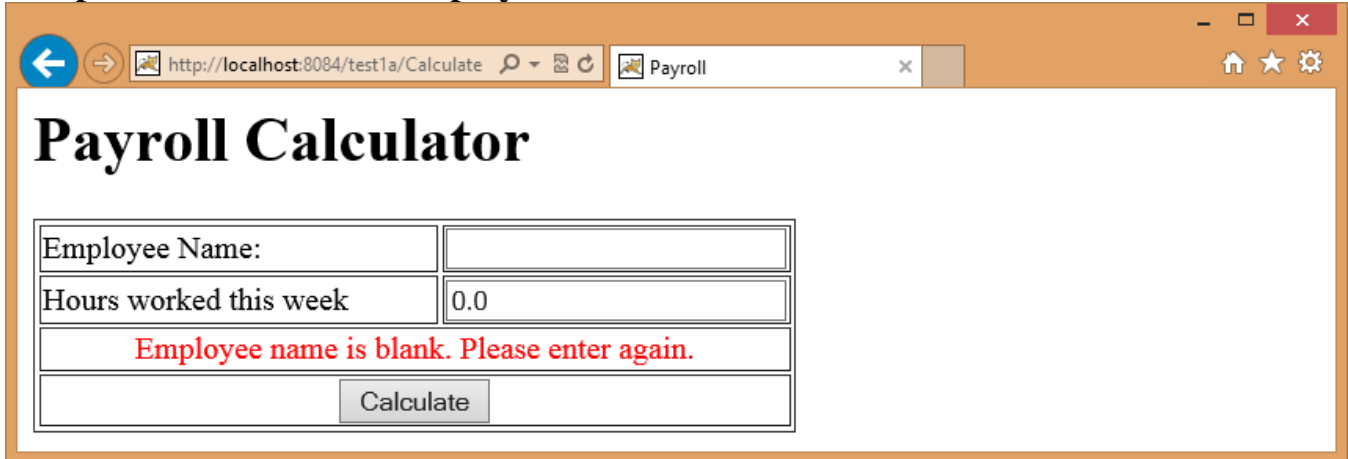

Employee Name:	John
Hours Worked This Week:	50.0
Gross Pay Amount:	550.0
Overtime Pay Amount (over 40 hours):	150.0

### Input Validation:

If the hours worked is blank, assign a default of zero. **Write code that will prevent *NullPointerException*. No exception handling is required.**

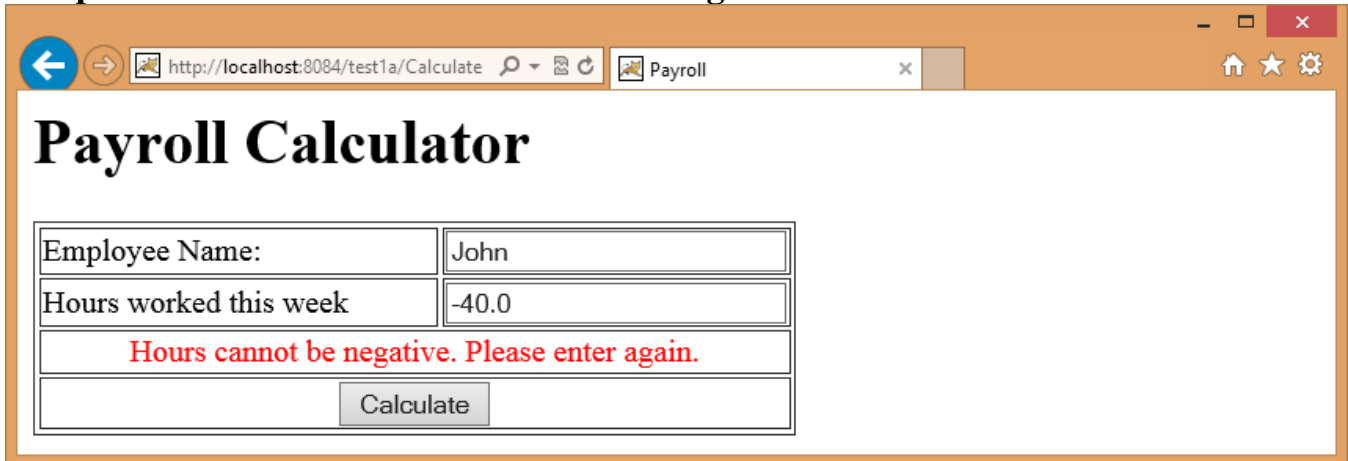

If there are errors, display the error as shown below.

### Sample screenshot when employee name is blank:

The screenshot shows a web browser window with the address bar at `http://localhost:8084/test1a/Calculate` and a tab titled "Payroll". The page title is "Payroll Calculator". The form contains two input fields: "Employee Name:" and "Hours worked this week". The "Employee Name:" field is empty, and the "Hours worked this week" field contains "0.0". Below the fields, a red error message reads: "Employee name is blank. Please enter again." At the bottom of the form is a "Calculate" button.

### Sample screenshot when hours worked is negative:

The screenshot shows the same web browser window. The "Employee Name:" field now contains "John", and the "Hours worked this week" field contains "-40.0". The red error message now reads: "Hours cannot be negative. Please enter again." The "Calculate" button remains at the bottom of the form.

**Code for Pay.java:**

```
public class Pay implements java.io.Serializable {

    private String employeename;
    private double hours;
    private double grosspay;
    private double overtimepay;
    final static double PAY_RATE = 10.0;
    final static double OVERTIME_RATE = 15.0;

    /** Creates a new instance of Pay */
    public Pay() {
    }

    public String getEmployeeName() {
        if (employeename == null)
            employeename = new String();
        return employeename;
    }

    public void setEmployeeName(String employeename) {
        this.employeename = employeename;
    }

    public double getHours() {
        return hours;
    }

    public void setHours(double hours) {
        this.hours = hours;
    }

    public double getGrosspay() {
        if (hours <= 40)
            grosspay = hours * PAY_RATE;
        else
            grosspay = 40 * PAY_RATE + (hours-40) * OVERTIME_RATE;
        return grosspay;
    }

    public double getOvertimepay() {
        if ((getGrosspay() - 40 * PAY_RATE) > 0)
            overtimepay = getGrosspay() - 40 * PAY_RATE;
        return overtimepay;
    } }
```

**1. Entry Form: Code for enterPay.jsp:****[3 marks]**

```

<html>
  <head>
    <title>Payroll</title>
  </head>
  <body>
    <h1>Payroll Calculator</h1>

    <form action="_____ " method="post">

      <input type="hidden" name="action" value="calcPay"/>
      <table border="1">
        <tr>
          <td width="200">Employee Name: </td>
          <td><input name="employeeenamel" type="text"

value="$ { _____ }" size="25"/></td>
        </tr>
        <tr>
          <td width="200">Hours worked this week</td>
          <td><input name="hours" type="text"

value="$ { _____ }" size="25"/></td>
        </tr>
        <tr>
          <td colspan="2" align="center"><font

color="red"/>$ { _____ }</td>
        </tr>
        <tr>
          <td colspan="2" align="center"><input type="submit" value="Calculate"/></td>
        </tr>
      </table>
    </form>
  </body>
</html>

```

**2. Code for Servlet (CalculatePayServlet.java):****[13 marks]****IMPORTANT:** All method variables are provided. Do not create any new variables.

```

package controller;

import com.abc.Pay;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.RequestDispatcher;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import javax.servlet.http.HttpSession;

public class CalculatePayServlet extends HttpServlet {

    protected void processRequest(HttpServletRequest request,
        HttpServletResponse response)
        throws ServletException, IOException {

        Pay payinfo = new Pay();
        String errorMessage = "";
        String employeeName = "";
        String hourString = "";
        double hours = 0;
        String url = "/enterPay.jsp";

        // process action input parameter [2 points]
        String action = request.getParameter("action");

        if ( _____ ) {
            action = "";
        }

        if ( _____ ) {

            // get parameters of input form
            employeeName = request.getParameter("employeename");
            hourString = request.getParameter("hours");

            // hours worked is null or blank, assign a default of zero. [1 point]

            if ( _____ ) {
                hourString = "0";
            }

            hours = Double.parseDouble(hourString);

```

# Winter 2022 – PROG2240

```
// validate employee name [1 point]

if ( _____ ) {

    _____

    url = "/enterPay.jsp";
}
else {

    // validate hours worked [1 point]

    if ( _____ ) {

        url = "/overtime.jsp";
    }

    } // end of else block
} // end of outer if

// prepare Pay object and error message [4 points]

_____  
_____  
_____  
_____  
_____

// forward to JSP page [1 point]
```

```
    }  
  
    protected void doGet(HttpServletRequest request, HttpServletResponse response)  
        throws ServletException, IOException {  
        processRequest(request, response);  
    }  
  
    protected void doPost(HttpServletRequest request, HttpServletResponse response)  
        throws ServletException, IOException {  
        processRequest(request, response);  
    }  
  
} // end of servlet code
```

**3. View Layer:****[ 4 marks]****regular.jsp:**

```
<html>
  <head>
    <title>Regular Pay Result</title>
  </head>
  <body>
    <h1>Regular Pay Calculation</h1>
    <table width="400" border="1">
      <tr>
        <td width="300">Employee Name: </td>

        <td>${ _____ }</td>
      </tr>
      <tr>
        <td width="300">Hours Worked This Week: </td>

        <td>${ _____ }</td>
      </tr>
      <tr>
        <td width="300">Gross Pay Amount: </td>

        <td>${ _____ }</td>
      </tr>
    </table>
  </body>
</html>
```

**overtime.jsp:**

```
<html>
<head>
  <title>Overtime Pay Result</title>
</head>
<body>
  <h1>Overtime Pay Calculation</h1>
  <table width="400" border="1">
    <tr>
      <td width="300">Employee Name: </td>

      <td>${ _____ }</td>
    </tr>
    <tr>
      <td width="300">Hours Worked This Week: </td>

      <td>${ _____ }</td>
    </tr>
    <tr>
      <td width="300">Gross Pay Amount: </td>

      <td>${ _____ }</td>
    </tr>
    <tr>
      <td width="300">Overtime Pay Amount (over 40 hours): </td>

      <td>${ _____ }</td>
    </tr>
  </table>
</body>
</html>
```
